

TRUEHN BANK & TRUEHNG BANK:

A Central Exchange Hub for Every Currency &

A Decentralized Central Banking System for an Alternative Parallel Global Society

WHITE SPIRITUAL BOY

### **The Current Reality**

The World is rapidly changing more and more every day, and the changes are only accelerating. One of the biggest changes happening throughout the world right now is in the banking industry. The advent of Bitcoin has launched the entire world into a frenzy of creating hundreds of new Digital currencies daily, with constant evolutions of blockchain technology being incorporated into each and every one. And now, even the Fiat Currency Central Banks are getting their hands wet shifting over to a Digital Currency platform using blockchain technology. Pretty soon, as part of the NWO Agenda, all Central Banks will become Digital Cryptocurrency Central Banks. The intention behind this is to create Digital ID's and Passports so they can track everything everyone does; and should anyone do, say, or even think anything their government doesn't want them to, they can limit access to their money or shut them down altogether in order to maintain absolute control over their populations.

### **The Problem**

It is already widely recognized that Fiat Currency is essentially valueless, and has become a monstrous system that can only end in one result - a massive crash as a result of the inflation bubble popping and an inability to pay off all the interest owed as a result of all Fiat Currency existing as Debt. This system serves the few at the expense of the many. Perhaps that is why Cryptocurrency was not only invented, but

released and allowed to grow to such a level. At this point, Cryptocurrency can no longer be separated from society. It has become a fully integrated component of our Global Economy. And with the imminent collapse of the Fiat Currency system posing a certain problem, Cryptocurrency has become a very important potential solution. So much so, that even the Central Banks are now moving to transition into Cryptocurrency themselves. All the money being printed right now in the United States of America is for the one specific purpose of crashing the fiat currency system. Knowing full well, that being debt based and having the stipulation of paying interest on top of principle, which was never even created, means that the eventual crash of our modern fiat currency economy is a certainty. There is no avoiding it. But to save face and institute the new system they will undoubtedly blame the crash on the so-called Global Pandemic, and use this scenario to force Digital ID's upon the populations to gain total control over all people. Two birds. One Stone. Unless, of course, we don't let that happen... to us. We may not be able to prevent this from happening to many people, but we can create a new system that allows us to not only continue living life as normal, without tyrannical government control, but also allows us to simulate a Free Access Economy for ourselves, while enabling ourselves to do business with the rest of the world, which means limitless wealth for everyone who participates.

### **Why a Free Access Economy?**

Now, for those of you who would prematurely call me out on being a Marxist, Socialist, or Communist, let's get something straight. A Free Access Economy is none of these. Karl Marx did not philosophize a Free Access Economy; he envisioned a system of government ownership defined as Collective Ownership. This, of course, is just another form of tyranny. It is no better than capitalism which serves the few at the expense of the many. What I am proposing here is not Collective Ownership, nor even individual ownership, but the total absence of the very concept of Ownership. I don't even mean the opposite of Collective Ownership. I strictly mean the absolute removal of the very concept altogether, neither Collective Ownership, nor Individual Ownership, but no such thing as Ownership at all. This doesn't even begin to compare to the UN's idea of "you will own nothing and be

happy.” Because, again, what they are implementing is government ownership, aka Socialism. They want to own everything, including all the people. This idea of “the absence of the concept of ownership” is fundamentally different and operates in a way that has been around for thousands of years, called “Stewardship.” Stewardship is the operation of Trusts in Private Equity Law, which is the extension of Natural Law in human affairs. In Trusts, there are no such thing as “owners.” There are only Managers and Beneficiaries, aka those who steward and those who benefit. The Trust owns itself as well as the property that is put into the trust, thereby removing the concept of ownership from the human interaction with the property. Instead of public and private “ownership,” there is public and private “management.” We are not here to own anything in the world, but to manage the things of the world for each other’s benefit. Philosophically speaking, only the Creator of a thing can be the Owner of thing. No human being, not even a Mother and a Father, are a Creator of anything in this world. We are using what is already created to synthesize something different. We are not creating, we are transforming, or transmuting. No one can effectively claim to be the owner of anything other than themselves, their own physical, mental and spiritual bodies. The particular type of Trust I suggest we use is something called the Natural Law Trust. A Natural Law Trust can be said to be the most ancient of all Contracts. Natural Law is the only real Jurisdiction of Law, it is the “Original Jurisdiction.” However, all Natural Law Trusts are Contracts directly founded upon Natural Law and the Principles of Natural Law. As such, they are extensions of the Jurisdiction of Natural Law acting under the power of Contracts, which is the very first act of socalled Magic. It’s magical because it has real power. It has real power because it is fundamentally based on Natural Law. One of the Maxim’s of Private Equity Law is that “Contract makes the law.” Every Kingdom, City State, Nation-State, Country, Church, etc. throughout antiquity could be said to have been operating as a Natural Law Trust. This is why they are “Sovereign in their own Right.” Throughout much of this history, however, rather than there being Trust Documents such as Constitutions, Treatise, or otherwise, there were blood oaths, or general contracts signed with a bloody thumb print. Signing in this way gives the document a connection to sentient/consciously aware life, thus giving it real power in Natural Law. Ink signatures are today’s version of the same thing. A Natural Law Trust is simply a Private Contract, based in the Original Jurisdiction of Natural Law that involves 3 different types of parties, the Grantor, the Trustee, and the Beneficiary. The Grantor

is the one who establishes the trust, which could be a business, or organization as a legal fiction “person,” or it could be a real human being. The Trustees are the ones who manage the Trust on behalf of the Grantor for the benefit of the beneficiaries. The Beneficiaries are the ones who directly benefit from the use of the Trust. Notice in all of these relationships there is no such thing as an “Owner.” A Grantor is also known as a Settlor. One who Grants and one who Settles do not need to be tied to Ownership. In a Trust, everything is managed. If it is Private Property that is being managed for Private Benefit, then it requires a minimum of only 2 people to establish a Trust, such as what would be known as a Private Estate. In this case, the Grantor may also be the Beneficiary, and there only needs to be one Trustee who is not related by blood. When establishing a Trust for a Business, however, it is a much larger and more complex machine. The Business would be the Grantor, that way you could be one of the Trustees and have managerial influence over the business along with your other Trustees. Or if you are really a small business of one, you can be the only Trustee. But since a Trustee cannot also be a Beneficiary, you simply would leave your Beneficiary unnamed until you have one, such as a child, spouse, or other loved one. Or if you wanted, you could make your Customers beneficiaries. In the TRUEHN STANDARD & TRUEHN GOLD BULLION STANDARD – the Alternative Global Society that TRUEHN BANK & TRUEHNG BANK are created for - that is exactly how it would operate. The Businesses and Organizations would be the Grantors, all their Managers and Employees would be Trustees, and their customers would be the Beneficiaries. After all, it is really the Customers who are supposed to benefit from businesses. In this way, all employees have managerial responsibility over the Business/Trust as equals, which is exactly how the TRUEHN(G) STANDARD operates in accordance with its Truehnocracy – a Holographically Organized Administrative System for all its members to participate in the administration of a business and society as a whole as equal and free sovereigns. With TRUEHN BANK & TRUEHNG BANK, the Trustees who are also Members of TRUEHN(G) STANDARD don't need to be paid, because they will be able to participate in its Free Access Economy which will be explained below. The extra savings can be passed down to the non-Member Trustees, increasing their payroll dramatically so they can live better lives too. It creates a win-win-win for the business, the members of the TRUEHN(G) STANDARD, and the non-Members of TRUEHN(G) STANDARD who work in the company. The Free Access Economy will

at first operate as a “Service based Free Access Economy.” This means that Members of the TRUEHN(G) STANDARD only need to contribute a minimum service of 4 hours per week in any business or organization within the TRUEHN(G) STANDARD in order to participate in our Free Access Economy. But the intention here is to transition from a “Service based Free Access Economy” to a legitimate Free Access Economy in which money no longer needs to exist. One such idea is the Venus Project’s Resource Based Economy, or what we would call, a “Resource based Free Access Economy.” The idea here being that we can use technology to manage the recycling and distribution of resources as efficiently as possible to ensure a perpetuation of resources to provide for the absolute abundance and prosperity of all people throughout our society in harmony with Mother Nature and Natural Law. The only reason we don’t recycle our resources right now is because you can’t make a profit doing it. The only reason we don’t go around cleaning the oceans right now is because you can’t make a profit doing it. The only reason we create products with planned obsolescence right now is because you can make a higher profit doing it. The only reason we force the masses to just barely survive so that the few at the top of the pyramids can thrive is because we can make a higher profit doing it. See the problem here? A Free Access Economy resolves all these problems in one fell swoop. But first we need to simulate a Free Access Economy while still using money in order to eventually create a real and true Free Access Economy. Here is how we will do it.

## **The Solution**

The Solution to this is two-fold. We not only need to resolve the issue that is the Debt Based Monetary System that forces us into a state of highly restricted freedoms - aka slavery - but we also need to resolve the issue that is government tyranny which is working in tandem with the global central banking systems to keep the people enslaved. We don’t want to create just another Legal Tender Currency. **We need to create a whole new alternative Central Banking System for a whole new Parallel Society** - a Global Society that exists parallel to the UN’s NWO Society. While their new Cryptocurrency Central Banking Systems will be a new debt-based system in which it is likely they will continue to charge interest on top of, which will therefore

continue to enslave the governments and their Citizens, and enslave them even more than ever before, our new Decentralized Central Banking System will allow us to experience pure freedom in a Simulated Free Access Economy that allows us to continue doing business with the NWO Secular Society. In order to have a new Central Banking System that follows its own rules, we need to have a new Society in which to establish those rules and allow them to thrive. As it stands, the governments and their agencies set the policies for how their central banking systems, and therefore, any banks within those systems, are to operate. In order for us to reinvent how banking systems are to operate, we have to establish such a Central Banking System in a reinvented society. That society is the TRUEHN(G) STANDARD and is already underway.

### **The New Free Access Decentralized Central Banking System**

It is important to understand, first and foremost, that the rules which dictate the creation of money, and the procedures and policies of the existing Central Banking Systems are entirely arbitrary, not even based upon any foundations in Nature or Natural Law. They are mere inventions, created to serve the elite at the expense of the slaves. As these rules are completely arbitrary, we have the power, therefore, to recreate these rules as we see fit in order to enable an Economy that generates absolute freedom and abundance for all in our Society. Take for example, the creation of money. In the Fiat Currency Fractal Reserve Banking Systems, money is created by loans and bonds. Governments create bonds, and businesses and people take out loans. When this is done, money is created out of thin air in order to fund these bonds and loans. All they require of the banks is a minimum of 10% (on average) retained in actual holdings (not true of the Central Banks, however, since they are the first printers of money). So, for example, as long as a bank has \$1 Million on hand, they can create up to \$9 Million in loans, adding to the existing currency supply, whereas the Central Bank creates money-on-demand for the Government in exchange for government bonds which hold their citizens as collateral for the loans. Furthermore, that money is created as a debt. It is owed back to the bank, despite the fact that they never took any risk in creating the loan in the first place. But to add salt to the wound, so to speak, they require that interest also be

paid back on top of that - interest which was never actually created in the first place, which means someone else must suffer in default of their debt in order for someone else's debt to be fully repaid. This is a system that enslaves the masses. Now let's look at how TRUEHN(G) BANK would reinvent this system. In TRUEHN(G) BANK, rather than money be created by taking out loans or bonds, money is created on demand for the purchase of products and services. In other words, the currency itself isn't even created until the demand for it is needed via the act of completing a transaction. Furthermore, this money is not owed back to TRUEHN(G) BANK, therefore it is not a debt. This enables the Members of the TRUEHN(G) STANDARD to spend money whenever, wherever, however, on whatever, as needed without having to worry about how much money they have in the bank. It is like giving everyone access to an infinite pool of money. Or more specifically, it is like giving everyone equal access to "spending power," aka "credit." But again, credit, once spent, does not need to become a debt. That is just an arbitrary rule used to enslave the masses. So, let's now compare, then, the difference between how the value of money is determined in the TRUEHN(G) BANK vs. the existing systems. In the existing banking systems, including all other Cryptocurrency systems, value is initially determined by some arbitrary rule, be it the processing of information, the use of electricity (work), the value of another Currency, etc. From there, the traditional idea is that the value of the currency should fluctuate based on how it is traded in the market, coupled with how many "Coins" there are in existence. The more people buying, or the less people selling, and the less coins there are, the more value they gain, generally via the loss of value in the currencies used to purchase them. Conversely, the less people buying, or the more people selling, and the more coins there are, the more value they lose, again generally to the gain of value in the currencies they are being sold into. These are, again, arbitrary rules. Why should we have to follow them just because that's what everyone else does, and has done for virtually the entire history of the monetary system? The rules for TRUEHN(G) BANK are that the value of one TRUEHN ore one TRUEHN GOLD will always retain the highest value of 1,000,000.00€ for TRUEHN and 1,000,000,000,000.00€ TRUEHN GOLD. In this way, the value may go up, but it may never come down. It shall always be pegged to the all-time high of gold backed Legal Tender Currency. Furthermore, our money shall be backed by a renewable resource that actually represents what it was originally invented to represent - the time and energy of people in responsible

service to society, otherwise known as “Love.” Love is not do this for me and I do that for you. Love – as we define it – is just “here I am and this is how I want to add value to human nature”. The TRUEHN(G) STANDARD is all about helping others and giving love. In this way, there is reason to believe that it doesn’t matter how many coins we end up creating, there is no reason for them to lose value based on the amount in circulation because there are always more people joining our society, and so, for the life of TRUEHN(G) BANK, there will always be more people whose Love is backing the value of TRUEHN, TRUEHN GOLD and other TRUEHN FAMILY CURRENCIES. Furthermore, while it is not backed by cash & gold reserves, it is backed by the metaphysical concept of Love, which is inherently the physical concept of service. Therefore, we would not actually need to hold onto stores of gold in order to peg it to gold. Why peg it to euros & gold but back it by Love? Well, aside from the fact that Love is a renewable resource and euros & gold are not, the idea here is that we are transitioning the TRUEHN(G) STANDARD from a Monetary based Free Access Economy to a Resource based Free Access Economy. We will use money so long as we need to do business with other societies. But once we grow to the point of self-sustainability and no longer need to do business outside of the TRUEHN(G) STANDARD, our money will uselessly pile up since we create it, but don’t actually spend it. At this point, we can transition to a true Free Access Economy in which money no longer exists. In order to participate in the Free Access Economy of the TRUEHN(G) STANDARD, you have to be a Member of the TRUEHN(G) ORGANIZATION, which, until we reach self-sustainability, means that you work in a business or organization that is domiciled in TRUEHN LAND for at least 4 hours per week. This is because until we are technologically advanced enough, service is the most important function of society. So, it will be a “Service based Free Access Economy” with a small minimum requirement that is easy for anyone to achieve. Service is Love. And Love is what ultimately backs TRUEHN, TRUEHN GOLD and TRUEHN FAMILY CURRENCIES in the end game. And for those who have physical limitations, you’d be happy to know that we will form an organization you can join whereby you only have to meditate on world peace twice a day for 20 minutes each, 6 days a week, which equals 4 hours per week of service. This means that Blockchain Legal Tender Currencies, while still tradeable in the market, are not a profitable investment. Generally speaking, TRUEHN(G) may be created upon use in a transaction. But it is equally true that when someone from the NWO society spends

money on a business in the TRUEHN(G) STANDARD, that money is exchanged into TRUEHN(G) STANDARD Legal Tender Currency for the purpose of being held within our Banking System. As such, if we wanted to, we could allow people to purchase Blockchain Legal Tender Currency in the cryptocurrency market, but again, the value will seldom increase, meaning it's not a good investment, but would make a great holding place for retaining money at an absolutely stable value. This, in and of itself, could be valuable to many people. For example, it would be a great place to hold money in escrow. The trick will be finding a way to spend TRUEHN, TRUEHN GOLD and TRUEHN FAMILY CURRENCIES in a way that allows them to be liquidly exchangeable with any other legal tender currency in real time. Fortunately, there are already Credit Card Companies providing just such a service to Cryptocurrency Wallets as well as the legendary TRUEHN SWAP. You can attach any such Credit Card to your Cryptocurrency wallet and then swipe that card for purchases. It will then, for a small fee, automatically convert your cryptocurrency into, say EURO or TRUEHN, for example, so you don't have to go the lengthy process of selling your cryptocurrency back to your bank account before being able to use it. These credit cards work with every major payment processor.

The logo graphic features a dark blue square background. At the top, there are several pink, semi-transparent, overlapping shapes that resemble stylized rays or petals. In the center of the blue square is a white rectangular box with a black border. Inside this box, the text 'TRUEHN BANK' is written in a bold, white, sans-serif font. Below it, the tagline 'For The Human Side Of Finance' is written in a smaller, white, sans-serif font.

TRUEHN CARDS – WORK WITH EVERY MAJOR PAYMENT PROCESSOR

One very important service that TRUEHN(G) BANK will provide to the TRUEHN(G) STANDARD is the creation of bank accounts through the use of Natural Law Trusts. TRUEHN(G) BANK, itself, is a Natural Law Trust, and everything in the TRUEHN(G) STANDARD is based upon Natural Law Trusts so that all of our property will be “Private Property” as far as Secular Societies and their Governments are concerned. The Natural Law Trust is the most powerful of all Private Trusts. This gives us two layers of protection, the Trusts as Private Property allow us to take such properties out of the Public Jurisdictions of existing governments, and domiciling them in the TRUEHN LAND sets it in a Jurisdiction that is Sovereign in its own right, just like any other government. Naturally, of course, while all Natural Law Trusts will be accepted at TRUEHN(G) BANK, it is up to the person creating the account whether or not they would like to domicile that Trust in TRUEHN LAND, or just keep as their own personal Private Property. However, only businesses and organizations domiciled in TRUEHN LAND may participate in the Social Administration of the TRUEHN(G) STANDARD. More importantly, it allows us to build mutually beneficial relationships with our Host Nations by adding money into their currency supply that didn't previously exist, thereby enabling them to pay off the interest on their loans more easily, and all without committing the act of counterfeiting. This may not sit well with the current central banks, but it will certainly sit well with the people, the Governments and Corporations. Furthermore, since TRUEHN(G) BANK is not only its own Natural Law Trust, but domiciled in TRUEHN LAND as its Central banking system, it is twice removed from the public jurisdictions of governments and is therefore, in no way, subject to their rules, laws, ordinances, codes and so forth. The SEC has no bearing on the operations of TRUEHN(G) BANK and no government or agency can tell us we are operating illegally no matter how different our rules may be.

**In Review:**

- 200% Back Up with euros & gold reserves
- Backed by Love – Time and energy spend in responsible service to society
- Is created out of thin air and on demand for purchases
- Is liquidly exchangeable with all other legal tender currencies

- Is the most stable legal tender currency ever created
- Enables us to Simulate a Free Access Economy for ourselves while doing business with Secular Society
- Creates accounts using Natural Law Trusts that may or may not be domiciled in TRUEHN LAND for membership in the TRUEHN(G) STANDARD
- Exists beyond the public jurisdiction of any government and is not subject to the rules of the SEC, or any other regulatory agency
- TRUEHN(G) BANK is our transition from a Monetary style “Service based Free Access Economy” to a nonmonetary style “Resource Based Free Access Economy”

### **The Technology**

TRUEHN(G) BANK utilizes the technology of THN38 TRUEHN CHAIN. THN38 TRUEHN CHAIN is a Holographic Blockchain, essentially following the same organizational system as the Truehnocracy for the TRUEHN(G) STANDARD. Like a typical Blockchain, it achieves the ability to encrypt information that is un-hackable and unchangeable, meaning all information in the system will always maintain integrity. But unlike Blockchain, in which every link in the chain, which continuously grows, must always be verified, leading to long wait times for transactions and a limited number of transactions per unit of time, THN38 TRUEHN CHAIN uses Holographic Organization to maintain the same level of integrity with the most efficient information processing capabilities, leading to the fastest possible processing times and the highest number of transactions per unit of time.

### **Action Plan**

With the Software and systems in place, it's time to on boarding and training of employees to run the bank offices and continue maintaining the online infrastructure. All such employees must be members of the TRUEHN(G) STANDARD because in

this business, there is no other way to pay the employees than for them to participate in the Free Access Economy, as TRUEHN(G) BANK does not make a profit.

To help us transition into a TRUE Free Access Economy. One in which money no longer even exists. We will eventually reach this point once the TRUEHN(G) STANDARD has become such a dominant Society Form in this world that we can sustain ourselves without having to do business with Secular Societies anymore. At this point, the spending of money within our own society will simply become an unnecessary formality that does nothing but uselessly amass Blockchain Legal Tender Currency, that no longer serve a purpose. It is at this point that the people, en masse, will be able to vote upon ending that formality altogether.

It is at this point that TRUEHN(G) BANK can transition from a Monetary Based Free Access Economy to a Resource Based Free Access Economy. In a Resource Based Economy, we still take an accounting of everything to keep of track of supply and demand. But we also begin using AI across the whole network to keep track of this supply and demand. Every business updates what supply they need as well as what resources, products and waste they may offer. The AI determines the most efficient way of distributing said resources, products and wastes to fulfil as much demand as possible. The recycling of resources (waste) to continue providing an ongoing abundance of resources. It is to be noted here that a core value of the TRUEHN(G) STANDARD is Personal Privacy. As such, it is not the purchase history of customers being tracked, but the purchase history of stores, distributors, mines, etc. The AI will essentially function in the same way that mycelium functions in a forest. Only, instead of regulating nutrients in the soil, it will be regulating resources in our economy. The algorithm will be set so that resources, products and wastes are distributed as efficiently as possible. But it will maintain fairness by maintaining a first come first serve basis when resources are in low supply. However, if it does its job properly, there should never be a low supply in anything, ever.

## **Conclusion**

It is only about going. 8 billion+ beneficiaries are invited to participate and enjoy the beauty of love with their peers heart2heart. We hope that our passion for a more compassionate world ignites love in you as well – and we know it does. *W.S.B*
